Cognitive Impairment is an important safety and quality issue for all Australian hospitals. Patients with cognitive impairment have more falls, pressure injuries and functional decline. Cognitive impairment can be poorly recognised or dismissed. 30-40% of delirium cases can be prevented.

Learn how to recognise cognitive impairment. Prevent delirium. Act to keep people with cognitive impairment safe.

Everyone can make a difference. Consumers and carers, Health service managers, Primary health, Health professionals in hospitals, Care & support staff in hospitals, Community care professionals.

Health Service Organisations: There are now cognitive impairment actions under the National Safety and Quality Health Service Standards.

Supporting Organisations: Supporting organisations are raising awareness and promoting good practice.
